# Yateeka Goyal

Atlanta, GA | 404-518-0830 | yateekag3135@gmail.com | linkedin.com/in/yateekagoyal773288238

## Education

**Georgia State University** Atlanta, GA
M.S. in Security and Privacy, GPA: 3.97/4.0 Expected Dec. 2027
*Relevant Coursework:* Machine Learning, Artificial Intelligence, Cryptography, Computer Networks & Security
**Georgia State University** Atlanta, GA
B.S. in Computer Science, GPA: 3.91/4.0 May 2026
*Honors & Certifications:* President's List, Certified in Cybersecurity

## Experience

**Response Team Intern** Atlanta, GA
Georgia State University, New Student Orientation May 2026 – July 2026

- Analyzed large, unstructured support datasets using Microsoft Excel to identify workflow bottlenecks, call-volume patterns, and operational inefficiencies.
- Used Python and NumPy to analyze support data and produce weekly reports tracking response metrics, service trends, and resource-allocation needs.

**Co-President HackHERS Program Lead** Atlanta, GA *Girls Who Code at Georgia State University* January 2025 – Present

- Lead the zero-to-one planning and execution of HackHERS, an MLH-approved hackathon for 150+ anticipated participants.
- Manage a cross-functional team of 15+ members across sponsorship, logistics, marketing, programming, and participant experience.
- Develop the event roadmap, program requirements, timeline, and success metrics in collaboration with university and industry stakeholders.
- Conduct strategic outreach, securing 10+ sponsors, mentors, speakers, judges, and recruiting representatives.

**Research Intern** Atlanta, GA
Georgia State University, University Assistant Program Jan. 2024 – Dec. 2025

- Investigated computational models, statistical vulnerabilities, and mathematical design assumptions with faculty researchers.
- Produced technical documentation summarizing research methods, experimental results, and implementation decisions.

## Projects

**CipherScope – AI-Powered Ciphertext Analysis Platform** | *Python, LLMs, Cryptography, Web Development*

- Built and deployed a zero-to-one web application that analyzes ciphertext and predicts the likely symmetric encryption algorithm without access to the encryption key.
- Translated a complex cryptographic research problem into an accessible user workflow by defining input requirements, analysis processes, and result presentation.
- Evaluated LLM outputs using statistical and structural ciphertext patterns, iterating on the classification approach to improve reliability and result interpretation.

**AI-Powered Predictive Analytics Platform**

- Used AI-assisted analysis to evaluate confidential support data, identify user pain points, and uncover recurring patterns in student inquiries and service workflows.
- Translated data findings into clear recommendations, operational requirements, and weekly reports for university stakeholders.
- Monitored inquiry volume, response trends, and issue categories to support data-driven prioritization and resource-allocation decisions.

## Technical Skills

**Languages:** Python, SQL/MySQL, Object Oriented Programming
**Tools & Technologies:** NumPy, Git/GitHub, Linux/Unix, Microsoft Excel, Data Visualization, Automated Testing, AI-Assisted Analysis
**Product Skills:** Product Roadmapping, Requirements Gathering, Stakeholder Management, User Feedback, KPI Definition, Product Analytics, Cross-Functional Collaboration, Data-Driven Prioritization
**Quantitative Skills:** Statistical Modeling, Data Analytics, Probability Theory, Stochastic Processes, Numerical Methods
**Professional Skills:** Root-Cause Analysis, Technical Documentation, Model Validation, Stakeholder Communication
